

Current Implementation of add MenuItem

Issues:

1. parameter passing. What if we need to add an item description? At least two calls need to change maybe more.
2. What happens when `dialogFor.addItem()` call returns to non-existent item?

Suggested Implementation:

Notes:

1. One instance of parameter passing. this one can possibly be eliminated if 'd' is assigned to a variable in MenuItem constructor
2. No unpredictable return to non-existent objects.
